Our Diagnostic Tests for Bartonella

All diagnostic assays are performed according to Standard Operating Procedures. We follow strict quality control standards to provide the best possible results.

Enrichment PCR™ – single fluid \$125
Enrichment PCR™ – tissue \$200

Addition of enrichment culture in patented BAPGM media provides enhanced detection of Bartonella DNA missed by standard PCR detection methods. Genus-level primers detect the presence of Bartonella DNA occurring at a detectable level. All positive results are verified by sequencing. Typical sample is 3ml of blood/EDTA. Final results will be reported out within 3 weeks of sample receipt.

PCR– paraffin-embedded tissue \$125

Standard PCR is available for testing samples that cannot be cultured. Genus-level primers detect the presence of Bartonella DNA occurring at a detectable level. DNA sequencing and identification are included for positive results. Typical sample is 3ml of blood/EDTA. Results are reported out within 1 week of sample receipt.

Serology \$30 per test

Tests for antibodies against *Bartonella henselae* or against *Bartonella vinsonii berkhoffi* (dogs only). Requires 3ml serum. Results reported within 1 week.
